

Brainstorming, Idea Generation, and Prioritization

MoSCoW Prioritization Framework

1. Must-Have Features (Critical for Launch)

- **Secure JWT Authentication:** Role-based signups and route protection for patients, doctors, and admins.
- **Doctor Search and Filters:** Ability to sort and filter listings by specializations, experience levels, and fees.
- **Interactive Scheduling:** Interactive slot calendar preventing system overlapping bookings.
- **Doctor Verification Form:** Admin panel for validating practitioners.

2. Should-Have Features (High Value Features)

- **Real-Time Socket Alerts:** Instant client notifications when appointments are confirmed, cancelled, or modified.
- **Prescription PDF Tool:** In-dashboard prescription writer yielding formatted patient printouts.
- **Statistical Dashboard:** Chart.js analytical curves for admin monitoring patient densities and active practitioners.

3. Could-Have Features (Non-Essential Enhancements)

- **Payment Simulator:** Mock gateway process validating checkouts.
- **Light/Dark Mode Toggler:** UI personalization settings stored locally.

4. Won't-Have Features (Deferred to Next Version)

- **Telehealth Video Calling:** Integrating in-app video streams (deferred to third-party links for now).
- **Automated SMS Broadcasts:** Text notifications to patients (deferred due to API cost limits).
