

Empathy Map Canvas

Visualizing Patient and Doctor Persona States

1. Patient Persona: Sarah (Working Professional)

- **Says:** I need to schedule a consultation with an eye specialist today without spending an hour on hold.
- **Thinks:** Are these reviews online real? Is this doctor verified? What if I register and the slot is cancelled?
- **Does:** Logs into dashboard, inputs search filters for ratings, books slot on interactive calendar, checks notifications.
- **Feels:** Stressed by scheduling friction and health delays. Relieved once she receives a verified confirmation.

2. Doctor Persona: Dr. Richard Rodriguez (Ophthalmologist)

- **Says:** I want my clinic queue digitized so I can focus on checking patients, not answering scheduling calls.
- **Thinks:** I hope patients arrive exactly at their booked times. Writing paper records is slowing down my consultations.
- **Does:** Sets availability checkboxes, views patient logs, inputs digital prescriptions in dashboard, marks bookings completed.
- **Feels:** Overworked by administrative overhead. Satisfied with a clean system queue.

Empathy Map Matrix Canvas

SAYS (Patient / Doctor)	THINKS (Patient / Doctor)
DOES (Patient / Doctor)	FEELS (Patient / Doctor)
