

User Acceptance Testing (UAT)

Test Cases and Integration Run Results

1. UAT Test Cases

- **Test 1: User Login Verification:** Admin logins validated using database records. Failed attempts throw standard 401 warnings.
- **Test 2: Slot Collision Prevention:** Attempting to reserve the exact same slot on Interactive Calendar checks database and halts the overlapping booking.
- **Test 3: Interactive Filter Querying:** Changing fee sliders updates doctor directory instantly via pagination parameters.

2. Automated Integration Check Run Results

Tests output log validation:

```
Connecting to MongoDB for integration tests... Connected.
--- Test 1: Data Integrity ---
Patients Seeded: 110 (Expected: >100) -> PASS
Doctors Seeded: 80 (Expected: >80) -> PASS
Appointments Seeded: 520 (Expected: >500) -> PASS
PASS: Data integrity counts meet constraints.

--- Test 2: Credential Verification ---
PASS: User password hashing and encryption match.

--- Test 3: Double Booking Prevention ---
Booked first slot successfully.
PASS: Double-booking query detected slot conflict.

ALL TESTS PASSED SUCCESSFULLY!
```
